

# Jevina Verghese

Dubai, UAE | jevina.ae@gmail.com | +971-547407158 | linkedin.com/in/jevina-v

## Summary

Backend Software Engineer with 4+ years' experience in fintech and trading platforms, including high-frequency crypto trading and core banking. Skilled in Python, Java, and C, with a recent focus on real-time trading platforms in the UAE. Strong in microservices, data processing, performance optimization, and API integration. Proven ability to deliver production-grade systems in fast-paced environments.

## Skills

**Programming Languages:** Python, Java, C, SQL

**Frameworks:** Spring Boot, Hibernate, Django, FastAPI, Angular

**Data & Libraries:** NumPy, Pandas, Matplotlib, ClickHouse, PL/SQL, Oracle SQL, MySQL

**Messaging & Streaming:** NATS (Network Address Translation), TCP Sockets, WebSockets

**DevOps & Tools:** Git, Docker, Jenkins, CI/CD pipelines, Grafana, Confluence, JIRA, Jaspersoft Studio

**Testing & Debugging:** pytest, JUnit, Log4j2, Test-Driven Development (TDD)

**Cloud & Environments:** Linux, Windows, Azure (basic)

**Soft Skills:** Problem solving, Team Collaboration, Agile Methodologies, Communication

## Work Experience

**Backend Python and C Developer**, Creed and Bear – Dubai, UAE

April 2024 – Present

*FinTech company specializing in secure, AI-driven software solutions for digital asset trading*

- Engineered the backend of a high-frequency **OMS (Order Management System)** using Python and microservices, ensuring low-latency and high reliability.
- Integrated **Binance APIs** for real-time trading and order execution across **B2B/B2C** platforms.
- Built and tuned backend services for trading and risk metrics using **NumPy**, **Pandas**, and custom logic.
- Used **NATS (Neural Autonomic Transport System)** for fast, asynchronous messaging between microservices.
- Refactored legacy codebases into modular, maintainable components for better performance and scalability.
- Designed and executed unit, integration, and regression tests with **pytest** to ensure system reliability and data accuracy.

**Software Engineer**, Larsen and Toubro Infotech Mindtree (LTIM) – Mumbai, India

June 2021 – Feb 2024

- Led **Java development** for host, batch, and ad-hoc reporting modules in a **core banking system**.
- Migrated systems from **JDK 8 to OpenJDK 17** and upgraded **Log4j to Log4j2**, enhancing security and performance.
- Refactored legacy applications to the **Spring Boot framework** for better **scalability**.
- Developed **RESTful APIs** and integrated back-end services using **Spring** and **Hibernate**.
- Created dynamic reports using **Jaspersoft Studio** and optimized data queries with **PL/SQL**.
- Collaborated across **Agile teams** to deliver high-quality, **compliant systems** on tight timelines.

## Projects

**CV Analyzer with Cohere API,**

June 2025

Created a full-stack application to analyze resumes against job descriptions using the Cohere NLP API. Implemented resume parsing for PDF and DOCX formats, used OpenAI/Cohere embeddings for similarity matching, and built an interactive front-end for recruiters. Supports real-time analysis and integrates with external APIs for candidate scoring.

**Real-Time Risk Signal Microservice,**

May 2025

Developed a Python-based microservice to process high-volume trader data (10k+ trades/hour) and compute metrics such as max drawdown, win ratio, and profit factor. Utilized FastAPI for endpoint exposure, SQLite for local persistence, and batch processing for efficient ingestion.

## Education

---

**Don Bosco Institute of Technology, Mumbai University,**  
Bachelor of Engineering in Information Technology.

May 2021

## Awards & Recognition

---

- **'Shooting Star - Team contributor'**, LTIMindtree January 2024
- **1st Place**, Inter College Smart India Hackathon (SIH) December 2020
- **Public Relations Head**, Computer Society of India(CSI) - DBIT Student Chapter January 2020
